Experience

AZENTIO SOFTWARE PVT LTD

Bengaluru, India

Software Trainee Engineer

August 2025 – Present

- Engineered scalable RESTful APIs for digital banking systems using Spring Boot, enabling seamless integration with web and mobile client applications.
- Developed a full-stack performance testing platform using React and Spring Boot to execute automated and on-demand load tests, identify bottlenecks, and generate actionable insights.
- Analyzed and resolved performance bottlenecks in core and digital banking applications, improving system throughput and ensuring adherence to client SLAs.
- Implemented code coverage and quality analysis using JaCoCo, improving test coverage and maintaining high code reliability standards.

Software Engineer Intern

November 2024 – August 2025

- Designed and developed a cross-product automation dashboard using Spring Boot, React, AWS, and MongoDB, enabling real-time test monitoring and instant failure alerts.
- Built and maintained a UI automation framework using Playwright, TestNG, and Maven, integrating Allure Reports for detailed test reporting and analysis.
- Performed performance analysis of core banking systems, identifying UI and database inefficiencies and implementing optimizations to reduce latency.
- Automated Docker-based deployments using shell scripting and Bitbucket Pipelines, enabling efficient CI/CD workflows and minimizing downtime.

Education

KL University

Aug. 2021 – May 2025

Bachelor of Technology in Computer Science & Engineering (AI/ML), CGPA: 9.55

Vijayawada, Andhra Pradesh

Projects

Social Media Application | *Spring Boot, React, PostgreSQL, WebSockets* | [GitHub](#)

- Engineered a full-stack social media platform supporting real-time communication using WebSockets.
- Developed scalable backend services with Spring Boot and PostgreSQL to manage users, posts, and interactions.
- Designed responsive user interfaces using React to enable seamless user engagement and real-time updates.

Food Delivery Application | *Spring Boot, React, MongoDB, AWS S3, Spring Security, JWT* | [GitHub](#)

- Developed a full-stack food delivery platform with secure authentication and role-based access using Spring Security and JWT.
- Built RESTful APIs using Spring Boot and integrated them with a React frontend for seamless user experience.
- Utilized MongoDB for data storage and AWS S3 for handling media uploads such as product images.

Academic Project Management System | *Spring Boot, Microservices* | [GitHub](#)

- Developed a microservices-based academic project management system to streamline task tracking and collaboration.
- Implemented RESTful APIs for inter-service communication, ensuring scalability and maintainability.

Technical Skills

Programming: Java, Python, SQL

Frontend Development: React.js

Backend Frameworks: Spring Boot, MicroServices

Databases: MySQL, PostgreSQL, MongoDB

Tools & Technologies: AWS, Docker, Version Control, Postman, JMeter, Bitbucket CI/CD, Linux, Shell Scripting

Testing & Automation: Playwright, TestNG, Maven, Allure Reports

Other Skills: GEN-AI

Certifications

- [AWS Cloud Practitioner](#)
- [AWS Developer Associate](#)
- [Red Hat Enterprise Developer](#)
- [Java Certification](#)
